MANASSAS NATIONAL BATTLEFIELD PARK BYPASS (ROUTES 29 & 234)

Initial Screening Results

The Manassas National Battlefield Park Bypass study team has completed the initial screening of concepts that would allow Routes 29 and 234 to be closed within the Park boundaries. The screening process incorporated comments you made at the December public workshop. Several new concepts were developed in response, and some existing concepts were modified to minimize impacts you identified. Concepts recommended for further study are shown at right. Additional engineering detail will be developed to create more defined corridors, some of which will be carried forward and analyzed for the Draft Environmental Impact Statement. The No-Action and Transportation System Management (TSM) concepts, and elements of Mass Transit, are recommended for further evaluation.

At the December workshop we received feedback on which of the preliminary concepts you preferred and

Concepts Recommended for Further Study
